A WORD FROM YOUR HOST

Welcome to your Thumbprint AI Prompt Book. I built this resource specifically for MagnaWave and AuraWell practitioners because I kept seeing the same problem: brilliant, talented healers spending their best hours on business tasks that AI can handle in minutes — while the work that actually grows a practice gets squeezed out.

Every prompt in this book was built on Geoff Woods' CRIT model — Context, Role, Interview, Task — because vague prompts get vague results. These prompts are specific, tested, and built around the language, challenges, and opportunities unique to your world as a wellness entrepreneur.

Use this book as your private business accelerator. Copy a prompt, paste it into any AI tool, personalize the details, and watch what comes back. You are not learning AI. You are using it. There is a difference — and this book lives on the right side of that line.

Here's to building something remarkable.

— *Todd Schmiedeler*

THUMBPRINT
CURRICULUM

BEFORE YOU START

WHICH AI TOOL SHOULD YOU USE?

You do not need to master every AI platform. You need to know which tool to reach for when. Here is an honest, practitioner-friendly overview of the five most useful AI platforms — what each does best, what it costs, and the one scenario where each is your best choice. All prompts in this book work in any of these tools.

ChatGPT

OPENAI • [CHAT.OPENAI.COM](https://chat.openai.com) • FREE / \$20/MO

CORE STRENGTHS

- ✓ Versatile all-purpose business writing
- ✓ Long-form content and structured documents
- ✓ Excellent at multi-step instructions
- ✓ Best plugin and integration ecosystem
- ✓ Strong at data analysis with Code Interpreter

Best for practitioners: Writing service menus, drafting proposals, building 90-day plans, and creating client communication templates. The most widely supported tool for business use.

PRO TIP

Use GPT-4o for the most accurate results. Start a new chat for each prompt — do not carry old context into a new task.

Claude

ANTHROPIC • [CLAUDE.AI](https://claude.ai) • FREE / \$20/MO

CORE STRENGTHS

- ✓ Exceptional long-document understanding
- ✓ Nuanced, warm, human-sounding writing
- ✓ Handles large amounts of context at once
- ✓ Superior for tone matching and brand voice
- ✓ Very strong at SOPs and structured guides

Best for practitioners: Client-facing communications that need to sound warm and personal — welcome emails, testimonial content, social captions, and intake documents. Claude writes the way healers speak.

PRO TIP

Give Claude your existing writing as an example and ask it to match your voice. The results are remarkable for branded content.

Gemini

GOOGLE • GEMINI.GOOGLE.COM • FREE / \$20/MO

CORE STRENGTHS

- Real-time web search and current information
- Deep Google Workspace integration
- Strong at market research and competitive analysis
- Excellent for summarizing long documents
- Good at structured data and spreadsheet tasks

Best for practitioners: Researching local competitors, finding current wellness trends, building referral partner lists, and any task that benefits from real-time web access.

PRO TIP

Use Gemini when you need current data — “what are practitioners in my city charging for PEMF right now?” — other tools cannot answer this.

Perplexity AI

PERPLEXITY • PERPLEXITY.AI • FREE / \$20/MO

CORE STRENGTHS

- Research-grade answers with live citations
- Synthesizes multiple sources automatically
- Ideal for literature and science summaries
- Great for due diligence and fact-checking
- Clean output for complex research topics

Best for practitioners: Researching the science behind PEMF for credibility content, finding statistics for proposals, and pulling evidence-based talking points without wading through papers.

PRO TIP

Ask: “What does peer-reviewed research say about PEMF for [condition]?” — then use those citations in your educational content.

Meta AI

META • META.AI • COMPLETELY FREE

CORE STRENGTHS

- Completely free with no usage limits
- Built into Facebook, Instagram, and WhatsApp
- Fast for quick tasks and drafts
- Good for generating social ideas at volume
- Mass conversation integrated

Best for practitioners: Quick social media caption drafts directly inside Instagram and Facebook — the most frictionless tool for practitioners who need fast content help without switching apps.

PRO TIP

Use Meta AI inside Instagram Stories drafts for caption ideas. Zero friction makes it the one you will actually use daily.

How to Use This Prompt Book in 5 Steps

- 1 **Choose your focus area** — pick the chapter that addresses your most urgent business need today. Do not try to use all 21 prompts at once.
- 2 **Read the full CRIT prompt** — understand what each section does before copying. Context sets the stage, Role activates expertise, Interview personalizes the output, Task directs the work.
- 3 **Personalize before pasting** — replace all bracketed placeholders with your specific details. The more specific your inputs, the more useful the output.
- 4 **Paste the full prompt into your chosen AI tool** — do not break it into pieces. The complete CRIT structure works as a system.
- 5 **Refine with follow-up prompts** — the first output is a draft. Ask the AI to “make this more conversational,” “shorten the third section,” or “rewrite in my brand voice based on this example: [paste your writing].”

Want us to handle all of this for you? Thumbprint Amplify delivers done-for-you monthly content.

SOCIAL MEDIA & CONTENT MARKETING

MagnaWave and AuraWell practitioners live on Instagram, Facebook, and LinkedIn — but most are too busy with clients to post consistently. These prompts create platform-native, scroll-

stopping content that speaks directly to people experiencing chronic pain, fatigue, inflammation, or stress — without requiring a marketing degree.

Context · **R**ole · **I**nterview · **T**ask — Geoff Woods' CRIT Prompt Model

PROMPT 1

30-Day Content Calendar Builder

USE CASE & IMPACT

Eliminate the blank-page paralysis that keeps practitioners from posting. This prompt generates a full month of content ideas mapped to your audience's pain points, seasonal wellness moments, and offer cycles.

⚡ Practitioners who use this report saving 6–8 hours per month on content planning and see 40–60% higher engagement when posts match their audience's language.

C — CONTEXT

You are a wellness entrepreneur who operates a MagnaWave PEMF therapy business serving clients with chronic pain, inflammation, joint issues, and stress-related conditions. Your ideal clients are adults aged 35–65 who have tried conventional treatments without full relief and are open to drug-free, non-invasive alternatives. Your business is local, relationship-based, and referral-driven. You offer single sessions, packages, and monthly memberships.

R — ROLE

You are an expert social media strategist with 10+ years of experience in wellness, alternative health, and personal services marketing. You understand the FTC guidelines around health claims and know how to create compelling, compliant content that educates and converts without making prohibited medical claims.

I — INTERVIEW

Before building this calendar, confirm: (1) What is my primary platform — Instagram, Facebook, or both? (2) How many times per week do I want to post — 3x, 5x, or daily? (3) Do I have any upcoming promotions, events, or seasonal hooks in this 30-day period? (4) What is my single biggest business goal this month — new clients, referrals, or membership upgrades?

T — TASK

Build a complete 30-day social media content calendar. For each day include: the content theme, post format (reel, carousel, static image, story, or long-form), a 2-sentence caption concept written in warm, conversational language for a wellness audience, and one specific call-to-action. Balance

educational content (40%), social proof/testimonial prompts (30%), and promotional content (30%). Use language that describes client experiences — 'many clients report feeling...' — rather than clinical claims. Include 5 evergreen 'PEMF myth-busting' posts, 4 behind-the-scenes practitioner story posts, and at least 3 community engagement questions. Format as a clean table with columns: Day, Theme, Format, Caption Concept, CTA.

PROMPT 2

Testimonial-to-Content Transformer

USE CASE & IMPACT

Most practitioners collect glowing testimonials but let them sit in a folder. This prompt transforms raw client words into multiple pieces of platform-optimized content that build trust and drive inquiries.

⚡ Social proof is the #1 conversion driver for wellness services. Practitioners who systematically repurpose testimonials into content see 2–3x more direct inquiries than those who post educational content alone.

C — CONTEXT

You are a MagnaWave or AuraWell practitioner with a growing client base. You have just received a written or verbal testimonial from a client who experienced significant relief from chronic back pain, poor sleep, or low energy after a series of PEMF sessions. You want to use this testimonial ethically and compliantly across your social platforms.

R — ROLE

You are a content repurposing specialist and FTC-compliant wellness copywriter. You know how to honor client experiences, get explicit permission language right, and turn one piece of authentic feedback into a full content ecosystem without exaggerating results or making prohibited claims.

I — INTERVIEW

Please share: (1) The exact testimonial text or key phrases the client used. (2) The condition or goal the client was addressing — be specific. (3) How many sessions before they noticed a change? (4) Has the client given written permission to share their experience publicly? (5) Do you have a photo or video of the client I can incorporate?

T — TASK

Transform this client testimonial into a complete content package: (1) An Instagram caption (150–200 words) using the client's language, opening with the most emotionally resonant line, and ending with a soft CTA to book a consultation. (2) A Facebook long-form post (300–400 words) that provides educational context about what PEMF does in the body, weaves in the client story as illustration, and closes with a FAQ-style question to drive comments. (3) A 5-slide Instagram carousel

outline — slide 1: hook using the client's result, slides 2–4: educational context, slide 5: CTA. (4) A LinkedIn post (200 words) framed as a practitioner reflection on why this client's journey reinforces your commitment to PEMF therapy. (5) Three Instagram Stories frames. All content must use 'many clients report...' framing and avoid any diagnosis, treatment, or cure language.

PROMPT 3

Reels & Short-Form Video Script Writer

USE CASE & IMPACT

Video is the highest-reach format on every major platform but most practitioners have no idea what to say. This prompt creates punchy, authentic scripts that feel natural on camera and drive profile visits and bookings.

 *Reels receive 3–5x the organic reach of static posts. Practitioners with even one high-performing reel per week report consistent new client inquiries from people who had never heard of PEMF before.*

C — CONTEXT

You are a MagnaWave practitioner who sees clients ranging from retired veterans with joint pain to high-performance athletes recovering from injury. You are comfortable on camera but struggle with knowing what to say that will resonate without sounding sales-y. Your studio is professional, warm, and inviting. You want to grow your following organically and convert viewers into bookings.

R — ROLE

You are a short-form video strategist who specializes in wellness, health, and personal services content. You write scripts that sound like real people talking — not corporate announcements. You understand hook psychology, pattern interrupts, and how to structure a 30–60 second video that delivers a complete idea and motivates action.

I — INTERVIEW

Tell me: (1) What is the single topic or message for this video? (2) Who is the primary viewer — someone with chronic pain, an athlete, a caregiver, someone curious about wellness? (3) What tone fits your personality — educational and calm, energetic and enthusiastic, or empathetic and story-driven? (4) What action do you want the viewer to take after watching? (5) Do you want to speak directly to camera, demonstrate on a client (with permission), or narrate over B-roll?

T — TASK

Write 3 complete short-form video scripts (30–45 seconds each) on the given topic. Each script includes: (1) A 3-second hook line designed to stop the scroll — lead with curiosity, contradiction, or a bold statement. (2) The core message delivered in 5–7 natural, conversational sentences. (3) A specific, low-friction CTA ('link in bio to book a free 15-minute consult'). (4) On-screen text overlay suggestions for key moments. (5) One B-roll suggestion per script. Write the dialogue to sound like a

suggestions for key moments. (2) One or two suggestions per script. Write the dialogue to sound like a real person talking, not a polished ad. Avoid all medical claims. Include estimated word count and pacing notes so the practitioner knows where to breathe and pause.

CHAPTER 2 OF 8

BUSINESS DEVELOPMENT & STRATEGY

Growing a PEMF therapy practice requires more than great sessions — it requires positioning, packaging, and a clear growth strategy. These prompts help practitioners think like business owners, define their niche, build scalable offers, and plan for sustainable growth.

Context · **R**ole · **I**nterview · **T**ask — Geoff Woods' CRIT Prompt Model

PROMPT 1

Ideal Client Profile Deep-Dive Builder

USE CASE & IMPACT

Vague marketing produces vague results. This prompt helps practitioners identify and articulate their single best-fit client archetype with the precision needed to attract more of them through every marketing touchpoint.

⚡ Practitioners who define and commit to a specific ICP report 50–70% improvement in marketing efficiency and dramatically shorter sales cycles because every message lands with the right person.

C — CONTEXT

You are a MagnaWave or AuraWell practitioner who has been in business for 1–3 years. You have

served a variety of clients but have noticed that certain types of clients get the best results, refer the most people, and are the most enjoyable to work with. You want to sharpen your marketing to attract more of those ideal clients and fewer of the ones who are a poor fit.

R — ROLE

You are a business strategist and niche marketing expert who works exclusively with wellness practitioners and service-based businesses. You understand the psychology of health-conscious consumers, the decision-making journey for alternative therapy seekers, and how to translate practitioner intuition into actionable marketing strategy.

I — INTERVIEW

Walk me through: (1) Describe your 3 best clients in detail — what brought them in, what changed for them, and why you love working with them. (2) What condition, goal, or life situation do your best results serve — chronic pain, athletic recovery, sleep, stress, hormones, energy? (3) What age range, lifestyle, and values do your favorite clients share? (4) Where do they spend time online and in person? (5) What objections or fears did they have before their first session?

T — TASK

Build a complete Ideal Client Profile document with the following sections: (1) Client Archetype Name and one-sentence description — give them a name like 'Resilient Rita' or 'Performance Paul.' (2) Demographic snapshot — age, gender, occupation, income range, family situation, location type. (3) Psychographic profile — values, beliefs about health, relationship with conventional medicine, wellness identity. (4) Pain inventory — list their top 5 physical, emotional, and practical pain points in their own language. (5) Goal inventory — list their top 5 desired outcomes. (6) Decision journey — how they find you, what they research, what reassures them, what makes them book. (7) Objection map — their top 5 hesitations and the response that resolves each one. (8) Message resonance guide — 10 specific phrases and words that speak directly to this person. Format as a professional one-page reference document the practitioner can pin above their desk.

PROMPT 2

Service Menu & Pricing Architecture Designer

USE CASE & IMPACT

Most practitioners undercharge and offer a confusing menu of options. This prompt builds a clear, value-based offer stack that guides clients from a low-commitment entry point to high-ticket packages — without feeling pushy.

 A well-structured offer stack typically increases average client value by 30–50% by creating natural upgrade paths and removing the friction of 'what should I book?'

C — CONTEXT

You are a MagnaWave practitioner who currently offers single sessions and vaguely described packages. You struggle to explain your pricing confidently and often discount to close sales. You want a professional, value-aligned service menu that reflects the transformation you provide — not just the time you spend.

R — ROLE

You are a pricing strategist and service design consultant who works with wellness practitioners to build offer stacks that are psychologically compelling, easy to explain, and profitable. You understand value-based pricing, anchoring, and how to create a good-better-best framework that serves clients at every stage of their wellness journey.

I — INTERVIEW

Let's build your menu. Tell me: (1) What is your current session length and what does a single session feel like for the client from arrival to departure? (2) What results do clients typically experience after 1 session vs. 3 sessions vs. 10+ sessions? (3) What is your current pricing and how did you arrive at it? (4) Do you want to include any add-ons, membership tiers, or partner services? (5) What is the transformation you are ultimately selling — and what would that be worth to someone who has lived with their condition for 5 years?

T — TASK

Design a complete 3-tier service menu architecture: (1) Entry Tier — a low-commitment, low-risk first experience (single session or intro package) with name, description, price, and value statement. (2) Core Tier — a results-oriented package (recommended first purchase) with name, description, session count, price, and outcome promise. (3) Transformation Tier — a high-commitment, high-result package (membership or premium bundle) with name, description, what's included, price, and transformation promise. For each tier provide: the client this tier is designed for, the psychological reason for the price point, a 2-sentence sales script the practitioner can use verbally, and the natural upgrade path to the next tier. Also provide a pricing confidence script for when clients ask 'why is it this price?' Format as a professional menu card the practitioner can share digitally and print.

PROMPT 3

90-Day Business Growth Sprint Planner

USE CASE & IMPACT

Practitioners often have big goals but no structured path to them. This prompt creates a specific, week-by-week 90-day action plan tied to measurable outcomes — a strategic roadmap that lives between intention and execution.

 *Practitioners who operate with a 90-day plan consistently outperform those who don't — reporting 2x higher revenue growth and significantly lower burnout because every action has a purpose.*

C – CONTEXT

You are a MagnaWave or AuraWell practitioner who wants to meaningfully grow your practice over the next 90 days. You may want to increase monthly revenue, grow your client roster, launch a new offer, or build a stronger referral network. You have limited time — typically 2–4 hours per week for business development activities beyond serving clients.

R – ROLE

You are an executive business coach and strategic planner who works with solo practitioners and small wellness business owners. You specialize in 90-day sprint methodology — translating big annual goals into focused quarterly priorities, then into weekly actions that compound over time.

I – INTERVIEW

Before we build your plan, tell me: (1) What is your single most important business goal for the next 90 days — be specific with a number (e.g., go from 15 to 25 active clients, or from \$4,000 to \$7,000 monthly revenue)? (2) What are your current key numbers — active clients, average client value, monthly revenue? (3) What is your biggest growth constraint right now — awareness, conversion, retention, or capacity? (4) What business development activities have you tried and which felt most natural? (5) How many hours per week can you realistically dedicate to growth activities?

T – TASK

Build a complete 90-Day Business Growth Sprint Plan with: (1) A single Primary Goal stated in specific, measurable terms with a target date. (2) Three Supporting Milestones at Day 30, Day 60, and Day 90 that mark progress toward the primary goal. (3) A Weekly Action Blueprint — for each of the 13 weeks, list exactly 3 prioritized actions the practitioner must complete. Actions must be specific ('Post 3 reels using the testimonial from client X' — not 'post more content'). (4) A Metrics Dashboard — 5 KPIs to track weekly with simple tracking format. (5) A Quarterly Rhythm — weekly, monthly, and quarterly review cadence. (6) An Obstacle Map — top 5 predicted obstacles and a pre-planned response for each. Format as a printable planning document.

Want us to create business development & strategy content for you monthly?

Explore Thumbprint Amplify → thumbprintcurriculum.com

FINANCIAL ACUMEN & REVENUE GROWTH

Most wellness practitioners are excellent at their craft and poor at their numbers. These prompts help MagnaWave and AuraWell business owners understand their financial health, identify revenue leaks, model growth scenarios, and make confident decisions about pricing, staffing, and investment.

Context • **R**ole • **I**nterview • **T**ask — Geoff Woods' CRIT Prompt Model

PROMPT 1

Practice Revenue Analyzer & Opportunity Finder

USE CASE & IMPACT

Before improving results you must understand your current numbers. This prompt walks practitioners through a structured financial analysis that surfaces hidden revenue gaps, underperforming services, and quick-win opportunities.

⚡ *Practitioners consistently discover 20–30% of their potential revenue is being left on the table through underpricing, low rebooking rates, or dormant clients — all fixable once identified.*

C — CONTEXT

You are a MagnaWave practitioner running a solo or small-team wellness practice. You have a general sense of your monthly revenue but have never done a formal financial analysis. You want to understand where your money comes from, where it leaks, and where the biggest opportunities for growth are without overhauling everything at once.

R — ROLE

You are a financial analyst and business advisor who specializes in service-based wellness businesses. You are fluent in practice economics — session revenue, package attach rates, client lifetime value, rebooking rates, and referral economics — and you translate numbers into plain-language insights and actions.

I — INTERVIEW

I need these numbers to build your analysis: (1) Average number of sessions per week and your per-session or per-package price. (2) What percentage of first-time clients book a second appointment?

(3) How many active clients do you have versus how many have you seen in the last 12 months total? (4) What is your most popular service and your highest-margin service — are they the same? (5) What are your top 3 monthly expenses? (6) Do you currently have any recurring revenue — memberships, subscriptions, retainers?

T — TASK

Perform a complete Practice Revenue Analysis: (1) Calculate current monthly and annual revenue run-rate from the data provided. (2) Calculate Client Lifetime Value (CLV) — average sessions per client × average session value. (3) Identify the Rebooking Gap — if rebooking rate increased from current to 70%, what would monthly revenue be? (4) Identify the Dormant Client Opportunity — calculate potential revenue from reactivating lapsed clients with a specific campaign. (5) Identify the Pricing Gap — benchmark the practitioner's pricing against market standards and calculate revenue impact of a 10%, 15%, and 20% price increase. (6) Build a Revenue Opportunity Scorecard ranking the top 5 growth levers by impact and ease of implementation. (7) Provide a specific 30-day action plan targeting the #1 highest-impact, lowest-effort opportunity. Present all findings in clear language with a table and a plain-English executive summary.

PROMPT 2

Cash Flow Forecasting & Scenario Modeler

USE CASE & IMPACT

Seasonal slowdowns, equipment purchases, and hiring decisions all require cash flow visibility. This prompt builds a simple but powerful 6-month forecast that helps practitioners make informed decisions and avoid cash surprises.

 *Cash flow visibility reduces practitioner anxiety, enables proactive marketing before slow seasons, and creates the confidence needed to make growth investments with conviction.*

C — CONTEXT

You are a MagnaWave or AuraWell business owner planning for the next 6 months. You are considering a significant decision — hiring a part-time staff member, purchasing additional equipment, or investing in a marketing campaign — and you need to understand the financial implications before committing.

R — ROLE

You are a CFO-level financial strategist who works with small wellness businesses. You build scenario-based cash flow models that help owners see around corners — planning for best case, expected case, and downside scenarios — so they make decisions from confidence rather than guesswork.

I — INTERVIEW

To build your model I need: (1) Current average monthly revenue and the month-to-month variation across a typical year. (2) Fixed monthly expenses — rent/space, software, insurance, loan payments. (3) Variable expenses — supplies, contractor payments, marketing spend. (4) The specific decision you are evaluating — investment amount, expected monthly cost, and your hypothesis about the revenue impact. (5) Your current cash reserve and any anticipated large expenses in the next 6 months.

T — TASK

Build a 6-Month Cash Flow Forecast Model with three scenarios: (1) Base Case — current trajectory with no changes. (2) Growth Investment Scenario — with the specific investment made, showing monthly cash flow impact, break-even month, and 6-month net position. (3) Conservative Scenario — investment made but revenue growth is 50% of expected, showing worst-case cash position and the earliest warning sign to watch for. For each scenario provide: monthly cash in, cash out, and net cash position; a break-even analysis; and a plain-English 3-sentence interpretation of what the numbers mean for the decision. Include a Decision Recommendation section that states clearly: 'Based on these numbers, here is what I recommend and why.' Format as a table the practitioner can update monthly.

PROMPT 3

Membership & Recurring Revenue Program Designer

USE CASE & IMPACT

Session-by-session revenue is unpredictable and exhausting to maintain. This prompt designs a membership program that creates predictable monthly income, increases client retention, and transforms sporadic buyers into committed wellness partners.

 *A well-designed membership program typically adds \$2,000–\$6,000 per month in predictable recurring revenue while simultaneously increasing client retention by 60–80%.*

C — CONTEXT

You are a MagnaWave or AuraWell practitioner who currently relies entirely on pay-per-session revenue. You have a loyal client base that comes consistently but no formal membership structure. You want to create a recurring revenue program that rewards your best clients, gives you predictable income, and deepens the relationship without overwhelming your schedule.

R — ROLE

You are a membership program designer and recurring revenue strategist who has built subscription models for dozens of wellness practices. You understand the psychology of membership commitment, the pricing sweet spots for wellness consumers, and how to design a program that delivers genuine value — not just a discounted version of what they already buy.

I — INTERVIEW

Design this with me: (1) How many sessions per month could a committed member realistically attend without disrupting your schedule? (2) What additional value could you add to a membership that does not require significant additional time — education, community, priority booking, accountability check-ins? (3) What is your current pay-per-session price and package pricing? (4) How many current clients do you believe would join a membership if presented with the right offer? (5) Do you want one membership tier or a good-better structure?

T — TASK

Design a complete Wellness Membership Program: (1) Program Name and positioning statement — make it aspirational, not transactional. (2) Two-tier structure: Foundation Membership (entry-level) and Premier Membership (premium), each with: session allocation, additional benefits, monthly price, and value justification. (3) Member Benefits Menu — 10 specific benefits organized by tier, including both tangible (sessions, products) and experiential (community, priority access, educational content) value. (4) Launch Strategy — how to convert existing clients in the first 30 days, including a conversation script the practitioner can use verbally when presenting the membership. (5) Membership Economics — projected monthly recurring revenue at 5, 10, and 20 members per tier. (6) Retention Mechanism — what happens at Month 3 and Month 6 to keep members engaged. Format professionally.

Want us to create financial acumen & revenue growth content for you monthly?

Explore Thumbprint Amplify → thumbprintcurriculum.com

CHAPTER 4 OF 8

PROPOSALS, CONTRACTS & CLIENT COMMUNICATIONS

Professional documents build trust before a single session is delivered. These prompts help practitioners create polished proposals, clear service agreements, and compelling follow-up communications that position them as credible professionals — not just talented therapists.

C ontext · R ole · I nterview · T ask — Geoff Woods' CRIT Prompt Model

PROMPT 1

Corporate Wellness Proposal Writer

USE CASE & IMPACT

Selling PEMF services to employers, gyms, chiropractic offices, and sports teams unlocks high-volume, recurring B2B revenue streams. This prompt creates a persuasive, professional proposal tailored to the specific organization.

⚡ *A single corporate wellness contract can be worth \$1,500–\$8,000 per month — more than doubling a practitioner's revenue while requiring no additional marketing to fill individual appointments.*

C — CONTEXT

You are a MagnaWave practitioner who has been approached by a local employer, athletic organization, or wellness center about potentially bringing PEMF therapy services to their employees, team, or clients. You want to respond with a compelling, professional proposal that clearly communicates the value of PEMF, presents your services credibly, and offers a clear path to a signed agreement.

R — ROLE

You are a B2B wellness sales consultant and proposal writer with experience closing corporate wellness contracts. You know how to translate the science of PEMF into business language — reduced absenteeism, improved performance, lower healthcare costs, employee retention — and you structure proposals that answer the decision-maker's primary question: 'What is the ROI?'

I — INTERVIEW

Before writing, tell me: (1) Who is the prospective client — what type of organization and what is their primary business? (2) How many employees, athletes, or clients would potentially use the service? (3) What was the context of the initial conversation — did they reach out, did you pitch them, or was there a referral? (4) What specific outcomes are most relevant to this organization — performance, recovery, stress reduction, absenteeism? (5) What service format makes sense — on-site sessions, a dedicated day per week, or a dedicated room at their facility?

T — TASK

Write a complete Corporate Wellness Proposal document with the following sections: (1) Executive Summary — one page, business-language summary of the opportunity and the recommendation. (2) The Problem — describe the cost of employee fatigue, chronic pain, and stress in specific, quantified language relevant to their industry. (3) The Solution — describe MagnaWave PEMF therapy in accessible, non-clinical language, emphasizing outcomes not mechanisms. (4) Program Options — present three service formats (on-site weekly sessions, monthly wellness day, dedicated space partnership) with a clear description, session structure, staff commitment, and investment for each. (5) Expected Outcomes — 5 specific, measurable outcomes with realistic timeframes. (6) Investment

& ROI — pricing for each option and a simple ROI calculation. (7) About the Practitioner — a professional 3rd-person bio. (8) Next Steps — a clear call to action with a decision deadline. Format as a professional document ready to email as a PDF.

PROMPT 2

Client Intake & Informed Consent Package Builder

USE CASE & IMPACT

A professional intake and consent process protects the practitioner legally, sets appropriate expectations, and signals credibility to new clients from their very first interaction with the practice.

⚡ *Practitioners with professional intake processes report higher first-session conversion rates, fewer no-shows, and significantly better protection in the rare event of a client complaint.*

C — CONTEXT

You are a MagnaWave or AuraWell practitioner who currently has a basic or informal intake process. You want to create a professional, legally thoughtful intake and informed consent package that collects the health information you need, clearly explains what PEMF is and what it is not, sets appropriate expectations, and protects your practice without making clients feel they are about to sign a contract for surgery.

R — ROLE

You are a healthcare practice management consultant and legal documentation specialist who works with alternative and complementary wellness practitioners. You know how to write informed consent documents that are thorough without being intimidating, and intake forms that collect genuinely useful clinical information while building trust.

I — INTERVIEW

Help me tailor this: (1) What health information is essential for you to know before a PEMF session — contraindications, medications, implanted devices, pregnancy, active cancer treatment? (2) What are the most common misunderstandings new clients have about PEMF that you want to address proactively? (3) Do you currently have any language about contraindications and what would you add? (4) What is your cancellation and rescheduling policy? (5) Do you want separate forms for adult and minor clients?

T — TASK

Create a complete New Client Intake & Informed Consent Package with: (1) Welcome Letter — warm, professional, sets the tone for the relationship and what to expect at their first visit. (2) Health History Intake Form — comprehensive but friendly, covering relevant health history, current

conditions, medications, implants, and wellness goals. Formatted as fillable form. (3) PEMF

conditions, medications, implants, and wellness goals, formatted as a fillable form. (3) PEMF Education & Expectation-Setting Page — plain-language explanation of what PEMF is, how sessions work, what clients typically experience, and realistic outcome expectations (this page should answer the 5 most common new-client questions). (4) Contraindication Disclosure — clear, plain-language list of contraindications with a client acknowledgment signature. (5) Informed Consent Agreement — professional consent language covering scope of services, practitioner qualifications, no medical claims, cancellation policy, and client responsibilities. Include a note that this document should be reviewed by a local attorney before use.

PROMPT 3

Referral Partner Outreach & Agreement Builder

USE CASE & IMPACT

Referral partnerships with chiropractors, physical therapists, primary care physicians, and fitness studios are the highest-ROI growth strategy for PEMF practitioners. This prompt creates the outreach and agreement materials needed to build a professional referral network.

⚡ *A single strong referral relationship with a chiropractor or PT practice can generate 5–15 new clients per month consistently — representing \$3,000–\$10,000 in annual added revenue per partner.*

C — CONTEXT

You are a MagnaWave practitioner who wants to build a professional referral network with complementary health and wellness providers in your area. You believe your PEMF services naturally complement chiropractic, physical therapy, massage therapy, and functional medicine — and you want to approach these potential partners professionally, not as a cold sales pitch.

R — ROLE

You are a strategic partnerships consultant who works with wellness practitioners to build referral ecosystems. You know how to position PEMF as an enhancement — not a competitor — to conventional and complementary healthcare, and how to make a referral partnership easy, professional, and mutually beneficial for both parties.

I — INTERVIEW

Let's build your outreach: (1) Which type of provider are you approaching first — chiropractor, PT, sports medicine, functional medicine, or fitness facility? (2) Do you have an existing relationship with anyone at this practice or is this cold outreach? (3) What specific client types from their practice would benefit most from PEMF — post-adjustment recovery, pre-surgical preparation, chronic pain management? (4) What are you offering the partner — reciprocal referrals, a revenue share, a complimentary session, or simply a professional relationship? (5) How do you want to handle the referral tracking — simple verbal referral, referral cards, or digital tracking?

T — TASK

PROMPT

Create a complete Referral Partnership Package: (1) Initial Outreach Email — professional, concise, positions PEMF as complementary to their practice, requests a 20-minute coffee meeting. Make it feel like practitioner-to-practitioner, not a sales pitch. (2) One-Page Practice Overview — what MagnaWave PEMF is, who it serves, what results clients experience, and how it complements their specific modality. Designed to leave behind at the meeting. (3) Referral Partnership Agreement Letter — a simple, friendly (non-legal) document outlining the referral relationship, how referrals will be tracked and communicated, what the referring provider can expect in terms of client follow-up, and any reciprocal arrangements. (4) Patient Referral Card template — wallet-sized card the partner gives to clients they refer. (5) Follow-Up Email sequence — 3 emails: post-meeting thank you, 2-week check-in, and 30-day relationship nurture.

CHAPTER 5 OF 8

HR, TEAM BUILDING & OPERATIONS

As a MagnaWave or AuraWell practice grows, solo practitioners become managers. These prompts help practitioners hire right, build a strong team culture, create operational systems, and scale their practice without losing the personal touch that made them successful.

Context • **R**ole • **I**nterview • **T**ask — Geoff Woods' CRIT Prompt Model

PROMPT 1

First Hire Job Description & Interview Guide

USE CASE & IMPACT

The first hire is the most consequential decision a growing practitioner makes. This prompt creates a compelling job description, a structured interview process, and evaluation criteria that

attract high-quality candidates and reduce costly hiring mistakes.

 *Practitioners who use a structured hiring process report 60% fewer hiring mistakes and significantly faster new hire ramp-up time compared to those who hire based on instinct alone.*

C — CONTEXT

You are a MagnaWave or AuraWell practitioner whose practice has grown to the point where you cannot do everything alone. You are ready to make your first hire — likely a client coordinator, practice manager, or assistant practitioner. You want to hire someone who shares your values, represents your brand professionally, and frees you to do the work you are best at.

R — ROLE

You are an HR consultant and talent acquisition specialist who works with small wellness businesses making their first and second hires. You understand that small practices compete with larger employers for talent and that culture, mission, and flexibility are often the winning differentiators — if communicated correctly.

I — INTERVIEW

Help me find the right person: (1) What specific role are you hiring — client-facing coordinator, behind-the-scenes operations, or additional practitioner? (2) What are the 3 most important things this person will do every day? (3) What values, personality traits, and working style are non-negotiable for this person to succeed in your practice? (4) Is this full-time, part-time, or contractor? What is the compensation range? (5) What does success look like for this person at 30, 60, and 90 days?

T — TASK

Create a complete First Hire Package: (1) Job Description — compelling, mission-aligned posting that attracts values-aligned candidates. Include: role title, a 'Why This Role Matters' section, key responsibilities (5–7 specific), requirements vs. nice-to-haves, compensation, and a culture statement that sounds like your practice — not a Fortune 500 company. (2) Candidate Screening Questions — 10 application questions that reveal values alignment, problem-solving style, and communication skills without being a formal questionnaire. (3) Interview Guide — a structured interview framework with: 5 behavioral questions with what you are looking for in each answer, 3 situational scenarios specific to your practice, 2 culture-fit questions, and guidance on red flags to watch for. (4) Reference Check Script — 8 specific questions to ask former employers that reveal work ethic, reliability, and how the candidate handles difficulty. (5) 90-Day Onboarding Outline — week-by-week milestones for the new hire's first three months.

PROMPT 2

Standard Operating Procedure (SOP) Builder

USE CASE & IMPACT

Practices that operate from written SOPs can train staff faster, maintain consistent quality, and scale beyond the founder. This prompt builds a complete SOP for any key practice process — from client check-in to equipment cleaning to session protocols.

⚡ *Documented SOPs reduce training time by 50–70% and virtually eliminate the inconsistency that costs wellness practices their most valuable asset: trust.*

C — CONTEXT

You are a MagnaWave or AuraWell practice owner who currently holds all the institutional knowledge of how your business runs in your head. When you are not there, things fall apart or get done wrong. You want to document your key processes so that any team member can execute them consistently, and so your business can run without requiring your constant presence.

R — ROLE

You are an operations consultant and process documentation specialist who has helped dozens of service businesses create their first operations manual. You know how to extract tacit knowledge from founders, translate it into clear written procedures, and organize it into a format that new team members can actually follow.

I — INTERVIEW

Let's document your process: (1) What specific process are we documenting — client check-in, session setup, equipment cleaning, new client onboarding, social media posting, or another? (2) Walk me through every step of this process as if you are teaching someone who has never done it. Don't skip anything — include the small details. (3) What mistakes have staff or you made in this process that we want to prevent? (4) What does 'perfect execution' of this process look like to a client or observer? (5) How often does this process happen and who is responsible for it?

T — TASK

Create a complete Standard Operating Procedure document with: (1) SOP Title and purpose — one sentence explaining why this process matters and what outcome it produces. (2) Scope — who performs this procedure, when, and how often. (3) Required Materials/Tools — complete list of everything needed before starting. (4) Step-by-Step Instructions — numbered, detailed, written in second-person ('You will...'). Each step should be specific enough that a new employee on Day 1 could follow it without asking questions. Include decision points ('If X happens, do Y'). (5) Quality Standards — how to know you did it right. (6) Common Mistakes — the top 3 errors and how to avoid them. (7) Escalation Protocol — when and how to alert the owner if something goes wrong. (8) Version number and last-updated date. Format for inclusion in an operations manual binder.

PROMPT 3

Team Culture & Retention System Designer

USE CASE & IMPACT

Staff turnover in wellness businesses is expensive — both financially and in the client relationships that leave with departing team members. This prompt builds a culture framework and retention system that makes your practice a place people want to stay.

 *Practices with intentional culture systems report 70% lower turnover and measurably higher client satisfaction — because happy, engaged staff deliver better client experiences.*

C — CONTEXT

You are a growing MagnaWave or AuraWell practice owner with 2–5 team members. You care deeply about creating a positive work environment but have not formalized your culture or built intentional retention mechanisms. You want your team to feel valued, share your mission, and choose to stay long-term.

R — ROLE

You are an organizational culture consultant and employee experience designer who works with small wellness businesses. You understand that small practices cannot compete on salary alone but can dramatically outcompete larger employers on meaning, flexibility, recognition, and growth — if those advantages are made explicit and consistent.

I — INTERVIEW

Let's design your culture: (1) What are the 3–5 core values that define how your practice operates — not aspirational values, but how you actually behave on your best days? (2) What do your best team members say about working for you — what makes them stay? (3) What has caused you to lose good team members in the past and what would you do differently? (4) How do you currently recognize great work — formally or informally? (5) What growth opportunities can you realistically offer team members who want to advance?

T — TASK

Design a complete Team Culture & Retention System: (1) Culture Code Document — a 1-page living document that articulates your values in specific behavioral language ('We return every client message within 4 hours' — not 'We value responsiveness'). (2) Onboarding Experience Plan — the first 5 days of a new team member's experience, designed to make them feel welcome, clear on their role, and excited about the mission. (3) Recognition Cadence — a specific, scheduled system for recognizing great work: daily, weekly, and monthly recognition practices that cost little but mean a lot. (4) Monthly 1:1 Framework — a structured 30-minute monthly check-in template for every team member covering wins, challenges, growth, and what the owner can do to support them better. (5) Career Path Map — even in a small practice, describe the possible growth trajectory for each role so team members see a future. (6) Retention Risk Assessment — 5 early warning signs that a team member is disengaging and a proactive response protocol for each.

CHAPTER 6 OF 8

PROSPECT RESEARCH & CLIENT ACQUISITION

Finding the right potential clients — and knowing exactly how to reach them — is the foundation of sustainable practice growth. These prompts help practitioners research ideal prospects, craft outreach that converts, and build acquisition systems that work even when they are busy with clients.

C ontext · R ole · I nterview · T ask — Geoff Woods' CRIT Prompt Model

PROMPT 1

Community Partnership & Referral Source Mapper

USE CASE & IMPACT

Most new PEMF clients come from referrals — but practitioners rarely build referral systems intentionally. This prompt maps every viable referral source in your local market and creates a prioritized outreach plan.

⚡ *Practitioners who build structured referral ecosystems consistently report 60–80% of new clients coming from referral sources — representing the highest-quality, lowest-cost client acquisition available.*

C — CONTEXT

You are a MagnaWave or AuraWell practitioner in a specific geographic market. You want to systematically identify and activate every potential referral source within your community — not just healthcare providers, but any individual or organization that regularly interacts with your ideal clients.

R — ROLE

You are a local business development strategist who specializes in referral ecosystem design for service-based wellness businesses. You know how to identify non-obvious referral sources, prioritize by relationship potential and volume, and design outreach approaches that feel authentic rather than transactional.

I — INTERVIEW

Let's map your market: (1) What city, town, or region are you in and what is the population density — urban, suburban, or rural? (2) Describe your primary target client in detail — age, lifestyle, health history, activity level. (3) What types of professionals and organizations serve this exact person — think broadly beyond healthcare. (4) What referral relationships do you already have, even informal ones? (5) How much time can you commit monthly to relationship-building activities?

T — TASK

Build a complete Referral Source Ecosystem Map: (1) Tier 1 Partners (highest priority) — 10 specific types of referral sources with the highest potential volume and natural alignment. For each: why they are a natural fit, what their clients experience that makes PEMF relevant, and the opening line for your first conversation. (2) Tier 2 Partners (secondary priority) — 10 additional referral source types with strong but less immediate potential. (3) Community Anchor Organizations — 5 types of community organizations (employers, gyms, sports leagues, faith communities, senior centers) worth approaching with a group or employer wellness program. (4) Digital Referral Sources — online communities, local Facebook groups, and digital directories where your ideal clients actively seek recommendations. (5) 30-Day Activation Sprint — a specific week-by-week plan to make contact with your top 10 referral sources. Include: outreach format (email, phone, in-person), what to say, and what to offer. Format as a working document with checkboxes.

PROMPT 2

Cold Outreach Email & Follow-Up Sequence Writer

USE CASE & IMPACT

Most practitioners are uncomfortable with outreach because their messages sound salesy. This prompt creates authentic, value-led outreach sequences that open conversations rather than pitch services.

⚡ *Well-crafted cold outreach sequences achieve 3–5x higher response rates than generic pitch emails and build relationships that generate referrals for years.*

C — CONTEXT

You are a MagnaWave practitioner who has identified a specific type of prospect — a local chiropractor, sports team, employer, or community organization — that would be a natural referral

partner or client. You want to reach out but do not have an existing relationship and want to avoid coming across as a sales pitch.

R — ROLE

You are a relationship-based sales consultant and copywriter who helps wellness practitioners craft outreach that feels like a genuine professional introduction rather than a cold sales call. You understand the psychology of first impressions, the importance of leading with value, and how to create enough curiosity to earn a conversation.

I — INTERVIEW

Tell me about this outreach: (1) Who specifically are you reaching out to — name, title, organization type, and what you know about them. (2) What is the one most relevant connection between what you do and what they care about professionally? (3) What is the single most valuable thing you could offer this person that is not your paid service — an insight, a resource, a connection? (4) What is your ideal outcome from this outreach — a meeting, a referral conversation, a partnership discussion? (5) How did you find out about this person — online, referral, community event?

T — TASK

Write a complete 5-Touch Outreach Sequence: (1) Email 1 — Initial Outreach: professional, concise (under 150 words), opens with a specific observation about their work, offers one genuine piece of value, and requests a specific small action (a 15-minute call, not a sales meeting). (2) Email 2 — Value Add Follow-Up (Day 5 if no reply): share a relevant piece of content, research, or insight with zero ask. (3) Email 3 — Gentle Re-Engagement (Day 10 if no reply): acknowledge they are busy, restate the one-sentence value proposition, and make the ask even smaller. (4) Email 4 — The Break-Up (Day 18 if no reply): a brief, honest note that you will not reach out again but leave the door open with a specific future hook. (5) LinkedIn Connection Request (Day 3): a personalized 2-sentence connection request that references the email and adds context. For each touch: write the full copy, note the subject line, and explain the psychological principle behind each choice.

PROMPT 3

New Client Conversion & Follow-Up System Builder

USE CASE & IMPACT

The gap between an inquiry and a booked appointment is where most practitioners lose business. This prompt builds a conversion system — from first contact to confirmed booking — that captures prospects before they drift away.

⚡ *Practitioners who implement a structured follow-up system convert 50–70% of inquiries versus the 20–30% conversion typical of practitioners who respond informally.*

C — CONTEXT

You are a MagnaWave or AuraWell practitioner who receives inquiries through Instagram DMs, your website contact form, phone calls, and word-of-mouth referrals. You are inconsistent in following up and you know you are losing potential clients who reach out but never book. You want a reliable system that converts more inquiries without requiring you to be a salesperson.

R — ROLE

You are a client acquisition systems designer who works with wellness practitioners to build conversion processes that feel warm and human — not automated or pushy. You understand the psychology of the wellness consumer decision journey and how to guide someone from 'I'm curious' to 'I'm booked' in a way that feels like caring guidance, not a sales funnel.

I — INTERVIEW

Build the right system for you: (1) What are the top 3 channels through which new inquiries reach you — Instagram, website, phone, referral? (2) What does a typical inquiry look like — what do people ask and what hesitations do they express? (3) How quickly do you currently respond to inquiries and what do you say? (4) How many inquiries per month do you receive and how many convert to booked appointments? (5) Do you want a fully manual system, a partially automated system, or are you open to using simple tools like scheduling software and email templates?

T — TASK

Build a complete New Client Conversion System: (1) Inquiry Response Templates — a platform-specific first response for Instagram DM, website form, phone voicemail callback, and referral follow-up. Each template: responds within the implied timeframe, acknowledges their specific interest, answers the most common first question, and offers one specific easy next step. (2) Consultation Call Script — a structured 15-minute phone or video consultation framework: what to ask, what to share, how to handle common objections, and how to close to a booking without pressure. (3) Post-Consultation Follow-Up Sequence — if they do not book on the call: Day 1 follow-up email, Day 4 value email, Day 10 final gentle nudge. (4) Booking Confirmation Communication — the message they receive immediately after booking that reinforces their decision, tells them exactly what to expect, and begins building the relationship before they arrive. (5) No-Show / Cancellation Recovery Script — a specific outreach for people who cancel or no-show, designed to rebook without making them feel guilty.

AUTOMATION & BUSINESS EFFICIENCY

Every hour a MagnaWave or AuraWell practitioner spends on admin is an hour not spent with clients or building the business. These prompts help practitioners identify their biggest time leaks, build automation workflows, and use AI tools to multiply their output without multiplying their hours.

Context · **R**ole · **I**nterview · **T**ask — Geoff Woods' CRIT Prompt Model

PROMPT 1

Practice Time Audit & Automation Opportunity Finder

USE CASE & IMPACT

Before automating anything, you must know where your time actually goes. This prompt conducts a structured time audit and maps every automatable or delegatable task in your practice.

 *Most practitioners discover they spend 8–15 hours per week on tasks that could be automated or delegated — time that could be redirected to revenue-generating activities.*

C — CONTEXT

You are a MagnaWave or AuraWell practitioner who feels perpetually busy but cannot clearly identify where the time goes. You are doing everything yourself — client sessions, scheduling, invoicing, social media, emails, supply ordering, equipment maintenance — and you want to know which of these activities to automate, delegate, or eliminate.

R — ROLE

You are an operational efficiency consultant and AI tools specialist who works with small wellness businesses. You specialize in practice automation — identifying the highest-leverage tasks to systematize and recommending the right tools at the right price point for a small practice budget.

I – INTERVIEW

Walk me through your week: (1) List every recurring task you do in a typical week and estimate how many minutes each takes. Be honest — include the small things like responding to DMs, filing paperwork, and restocking supplies. (2) Which tasks do you find energizing and which do you dread? (3) Which tasks absolutely require your personal touch and which could theoretically be done by software or someone else? (4) What is your current tech stack — what software or apps do you use for scheduling, payments, communication, and marketing? (5) What is your monthly budget for new tools or services — \$0–50, \$50–150, or \$150+?

T – TASK

Conduct a complete Practice Time Audit & Automation Analysis: (1) Time Allocation Map — organize all tasks into four categories: Deep Work (only you, high value), Shallow Work (you but routine), Automatable (software can do this), Delegatable (another person could do this). (2) Automation Priority Matrix — rank automatable tasks by time saved per week and cost to automate, identifying the top 5 highest-ROI automation opportunities. (3) Tool Recommendations — for each automation opportunity, recommend a specific tool with: name, monthly cost, setup time, and exactly how it would work in this practice. (4) Delegation Roadmap — for delegatable tasks, specify: what role should own this, skill requirements, and estimated hourly cost if outsourced. (5) 30-Day Implementation Plan — a specific weekly action plan for implementing the top 3 automations without disrupting current operations. (6) Estimated Weekly Time Recovered — calculate total hours per week the practitioner would reclaim upon full implementation.

PROMPT 2

AI-Powered Client Communication System Builder

USE CASE & IMPACT

Consistent, warm client communication builds retention and referrals — but most practitioners are too busy to maintain it. This prompt builds a complete AI-assisted communication system that keeps clients engaged between sessions.

 *Practices with systematic client communication see 40–60% higher rebooking rates and 2–3x more referrals from existing clients compared to practices with sporadic communication.*

C – CONTEXT

You are a MagnaWave or AuraWell practitioner who wants to stay connected with clients between sessions — sending educational content, booking reminders, wellness check-ins, and referral requests — but you do not have time to personally craft and send individualized messages to every client consistently.

R – ROLE

You are an AI implementation consultant and client communication strategist who works with

wellness practitioners to build relationship systems that feel personal even when partially automated. You know how to use tools like email platforms, scheduling apps, and AI writing assistants to create touchpoints that strengthen the practitioner-client relationship at scale.

I – INTERVIEW

Design the right system for you: (1) How many active clients do you have and how frequently does each client typically visit? (2) What communication touchpoints do you currently have with clients outside of their sessions? (3) What is the most common reason clients stop coming — life gets busy, they feel better, cost, or they forget to rebook? (4) What platform do your clients prefer for communication — email, SMS, Instagram DM, or a client portal? (5) What tone represents your brand — warm and personal, professional and informative, or energetic and motivational?

T – TASK

Build a complete AI-Assisted Client Communication System: (1) Welcome Sequence (New Clients) — a 5-message sequence delivered over the first 30 days: post-booking confirmation, pre-appointment preparation guide, post-first-session check-in, Day 7 educational message, Day 21 progress check-in and rebook invitation. Write each message in full. (2) Active Client Nurture Cadence — a recurring monthly communication plan: one educational message, one wellness tip, one community story or success theme, and one rebook or upgrade prompt per month. Provide templates for each. (3) Reactivation Sequence (Lapsed Clients) — a 3-message sequence for clients who have not visited in 60+ days: re-engagement message, a personal check-in, and a come-back offer. (4) Referral Request System — a 2-step sequence to systematically ask happy clients for referrals at the moment of peak satisfaction. (5) AI Prompts for Personalization — 5 specific prompts the practitioner can use to quickly personalize each template before sending, using details from the client's intake form.

PROMPT 3

Weekly Business Dashboard & Performance Tracker Builder

USE CASE & IMPACT

You cannot improve what you do not measure. This prompt builds a simple weekly business dashboard that gives practitioners clear visibility into the numbers that actually drive practice growth.

 *Practitioners who track even 5 core metrics weekly consistently outperform those who don't — because visibility creates accountability and accountability creates action.*

C – CONTEXT

You are a MagnaWave or AuraWell practice owner who wants to run your business more intentionally. You want to spend 15 minutes every Friday reviewing the numbers that matter — not drowning in data, but having enough visibility to know whether you are on track, off track, or facing an emerging problem before it becomes a crisis.

R – ROLE

You are a business intelligence consultant and performance management specialist who works with small service businesses. You design simple, visual dashboards that translate raw business data into clear signals — green, yellow, or red — so owners can make fast, confident decisions without an MBA.

I – INTERVIEW

Build the right dashboard for you: (1) What business areas matter most to you right now — revenue, client growth, retention, marketing performance, or team performance? (2) What data do you currently have easy access to — your scheduling software, payment processor, or social media analytics? (3) How do you want to review this data — a spreadsheet you update manually, an automated dashboard, or a weekly AI-assisted summary? (4) What decisions do you most often need to make where better data would help? (5) What does your current 'this week was a good week' instinct rely on — and is that the right signal?

T – TASK

Build a complete Weekly Business Performance Dashboard: (1) The 10 Core Metrics — define exactly 10 KPIs that matter for a MagnaWave/AuraWell practice, with: metric name, how to calculate it, where to find the data, and why it matters. (2) Benchmark Targets — for each metric, define: minimum acceptable (red), on track (yellow), and thriving (green) benchmarks. (3) Weekly Review Template — a 15-minute Friday review process: the 10 questions to ask while looking at each metric, how to interpret the data, and what actions to take based on each signal. (4) Monthly Trend Analysis Prompt — a monthly AI prompt the practitioner can run to identify patterns, anomalies, and opportunities from the accumulated weekly data. (5) Google Sheets Dashboard Template — a plain-language description of exactly how to structure a simple Google Sheet dashboard the practitioner can build in 30 minutes. (6) 5 AI Prompts for Business Analysis — prompts to paste into any AI tool monthly to generate a plain-language 'state of my practice' analysis from their dashboard data.

Want us to create automation & business efficiency content for you monthly?

Explore Thumbprint Amplify → thumbprintcurriculum.com

CLIENT & STAFF ONBOARDING

First impressions are permanent. How a new client experiences their first interaction with your practice — and how a new team member experiences their first week — will shape their relationship with you for years. These prompts help practitioners build onboarding experiences that are organized, warm, and professionally impressive.

Context · **R**ole · **I**nterview · **T**ask — Geoff Woods' CRIT Prompt Model

PROMPT 1

New Client Welcome & Education Experience Builder

USE CASE & IMPACT

Most new PEMF clients arrive with confusion, curiosity, and mild skepticism. A structured welcome and education experience converts skeptics into believers before the first session even begins.

⚡ Practitioners with a formal new client welcome process report 80% first-to-second-session conversion rates compared to 40–50% for those without — nearly doubling client retention from the very first visit.

C — CONTEXT

You are a MagnaWave or AuraWell practitioner who wants new clients to arrive for their first session feeling prepared, excited, and confident. You want to deliver education and set expectations before they walk in the door — so the session time is spent on healing rather than orientation.

R — ROLE

You are a client experience designer and patient education specialist who works with alternative wellness practitioners. You know how to sequence information so it builds confidence and curiosity — not overwhelm — and how to use multiple media formats (email, video, written guide) to reach clients in the way they learn best.

I — INTERVIEW

Design this experience: (1) What are the top 5 questions first-time PEMF clients ask before their appointment? (2) What are the top 3 concerns or anxieties new clients express — is it about safety, effectiveness, cost, or something else? (3) What do you want every new client to know, believe, and feel before they walk in for their first session? (4) How long before the appointment do new clients typically book — same day, 2–3 days out, or a week or more? (5) What formats work best for your

clients — written emails, short videos, or a printed welcome packet?

T — TASK

Design a complete New Client Welcome Experience: (1) Booking Confirmation Message — immediately after booking, a warm message confirming their appointment, setting the tone, and telling them exactly what to expect. (2) 'What Is PEMF?' Education Email — sent 3–5 days before their appointment: plain-language explanation of how PEMF works, what they will feel during a session, and what clients commonly experience in the hours and days after. No medical claims — use experiential language. (3) Pre-Appointment Preparation Guide — sent the day before: what to wear, what to eat/drink, what to bring, what to leave behind, and how to find and enter the studio. (4) Day-of Welcome Text — morning of the appointment: a brief, warm message that builds anticipation and gives them a direct contact number for any last-minute questions. (5) Post-First-Session Follow-Up — sent within 24 hours: a check-in message asking how they feel, validating any detox or adjustment reactions, educating them on what to watch for, and presenting the natural next step (rebook or package recommendation). Write all five communications in full, using the practitioner's warm, professional brand voice.

PROMPT 2

Staff Training Curriculum Designer

USE CASE & IMPACT

Inconsistent staff performance is the #1 complaint in growing wellness practices. This prompt builds a complete training curriculum that turns new hires into confident, client-ready team members in 30 days.

 Practices with structured training curricula report new hires reaching full competency in half the time and delivering a significantly more consistent client experience.

C — CONTEXT

You are a MagnaWave or AuraWell practice owner who has hired or is about to hire a new team member — a client coordinator, front desk manager, or assistant practitioner. You want to give this person everything they need to succeed without spending all of your own time training them one-on-one.

R — ROLE

You are a learning and development specialist who designs training programs for small wellness businesses. You know how to sequence learning so new team members gain competence and confidence progressively — starting with foundations and building to independent performance — without overwhelming them in week one.

I — INTERVIEW

Design the right curriculum: (1) What role is this person being trained for and what are the 5 most critical things they must be able to do independently within 30 days? (2) What are the most common mistakes new team members make in your practice and what is the impact on the client experience? (3) What is your preferred training format — written guides, shadow sessions, role-playing, video walkthroughs, or a combination? (4) How much time can you personally invest in direct training versus self-directed learning? (5) What does 'fully trained' look like — what would they need to demonstrate before you trust them to operate independently?

T — TASK

Build a complete 30-Day Staff Training Curriculum: (1) Training Roadmap — a visual week-by-week overview of the learning journey with clear milestones. (2) Week 1: Foundation — curriculum content for Days 1–5: practice mission and values orientation, facility walkthrough and safety protocols, client communication standards, and equipment introduction. Include daily learning objectives and one skills demonstration per day. (3) Week 2: Core Skills — curriculum for the role's primary responsibilities with specific training activities, practice scenarios, and competency checks. (4) Week 3: Client Experience Mastery — deep training on client-facing skills: how to handle difficult situations, how to represent the brand in every interaction, how to support the practitioner during sessions. (5) Week 4: Independent Performance — supervised independent work with daily debrief, issue resolution, and evaluation toward sign-off. (6) Competency Evaluation Checklist — a specific 20-item checklist the owner uses at Day 30 to confirm the new hire is ready to operate without supervision. (7) Ongoing Development Plan — monthly training touchpoints for the first 6 months after onboarding.

PROMPT 3

Client Wellness Journey Mapper & Progress Tracker

USE CASE & IMPACT

Clients who feel seen, tracked, and celebrated stay longer and refer more. This prompt builds a client journey tracking system that captures progress, celebrates milestones, and creates the data needed to demonstrate the value of ongoing PEMF investment.

 *Practitioners who systematically track and celebrate client progress report 3x higher package upgrade rates and dramatically stronger referral behavior from clients who feel their results are being recognized.*

C — CONTEXT

You are a MagnaWave or AuraWell practitioner who wants to formalize how you track each client's wellness journey — capturing their starting point, monitoring their progress, celebrating milestones, and using that data to have meaningful conversations about continuing care.

R — ROLE

You are a client success architect and wellness outcomes specialist who designs client journey

You are a client success architect and wellness outcomes specialist who designs client journey systems for alternative health practitioners. You know how to create progress-tracking tools that feel motivating rather than clinical, and how to use progress data to deepen the practitioner-client relationship and extend client lifetime value.

I – INTERVIEW

Build the right system: (1) What are the primary outcomes or symptoms your clients are working on — pain scale, sleep quality, energy level, mobility, mood, athletic performance? (2) How do you currently track client progress — verbally during sessions, written notes, or not at all? (3) At what intervals do you want formal progress check-ins — every session, every 5th session, monthly? (4) What would you want a client to do with their progress data — share it, review it with you, or simply have it for themselves? (5) What is the single most powerful moment in a client's journey where a progress review would be most motivating and most likely to lead to a package upgrade?

T – TASK

Build a complete Client Wellness Journey Tracking System: (1) Initial Wellness Baseline Assessment — a structured intake assessment (separate from health history) that captures the client's primary goals, their current symptom levels on 5 key dimensions using a 1–10 scale, and their definition of 'success.' Write this as a friendly, conversational document. (2) Session Progress Notes Template — a simple 2-minute post-session template the practitioner completes after each visit capturing: what was done, client-reported experience, practitioner observations, and next session recommendation. (3) 5-Session Progress Review — a structured conversation framework for every 5th session: review baseline vs. current scores, celebrate specific progress, identify any plateaus, and present the natural next phase of care. Include the specific language for presenting a package upgrade at this moment. (4) Milestone Celebration System — specific triggers (first 5 sessions, pain score improvement of 3+ points, 90 days of consistency) and corresponding recognition gestures — from a personal text to a printed certificate. (5) 3-Month Outcome Summary — a template for generating a personalized progress report at the 3-month mark that the client can share with family or their referring healthcare provider. This is also a powerful referral tool.

WHAT'S NEXT

ADDITIONAL ASSETS WE RECOMMEND

Based on what works for MagnaWave and AuraWell practitioners, here are the additional tools, resources, and Thumbprint products that would amplify the results you get from this prompt book.

AI Avatar Video Series

A set of 10 short educational video scripts written for MagnaWave/AuraWell practitioners, formatted for HeyGen/Synthesia. Your avatar delivers consistent education content every week without stepping in front of a camera.

12-Month Email Nurture Sequence

A done-for-you 52-email annual sequence covering every season, wellness moment, and offer cycle. Import into any email platform and let it run. Pairs directly with Thumbprint Amplify.

Practice Metrics Dashboard

A pre-built Google Sheets dashboard with 10 KPI trackers, automatic revenue run-rate calculation, client retention visualization, and a monthly AI analysis prompt. 15 minutes to maintain weekly.

IWT Funding Alert Service

Thumbprint monitors Incumbent Worker Training fund availability across every workforce board region. When funding opens in your area, you get a direct notification with exactly how to apply. Available to Circle members.

PEMF Client Education Guide

A professionally designed, FTC-compliant 8-page client education PDF covering how PEMF works, what sessions feel like, and answers to the 10 most common new-client questions. Available branded to your practice.

Referral Partner Toolkit

A complete done-for-you referral partner outreach kit: email templates, one-page practice overview, referral cards, and partner tracking sheet. Designed for chiropractic, PT, and functional medicine outreach.

Thumbprint Circle Community

Weekly live sessions covering new AI tools, real practitioner use cases, and open hot-seat problem-solving. The community where these prompts get applied live, refined, and shared. Founding member rate at conference.

Social Media Caption Swipe File

100 done-for-you social media captions organized by topic — education, testimonial, offer, myth-busting, engagement — all written for the MagnaWave/AuraWell audience and FTC-compliant. Plug in, personalize, post.

IMPORTANT DISCLOSURES & DISCLAIMERS

NO MEDICAL CLAIMS

The prompts, templates, and content frameworks contained in this guide are designed for marketing, business development, and client communications purposes only. No content generated using these prompts should make medical claims, diagnose conditions, prescribe treatments, or imply that PEMF therapy is a medical treatment. All client-facing content generated using these prompts should describe client experiences in experiential language (“many clients report...”) and must comply with FTC guidelines for health and wellness marketing. Practitioners are solely responsible for ensuring that all published content complies with applicable federal, state, and local laws and regulations governing health claims and marketing.

AI-GENERATED CONTENT NOTICE

The prompts in this guide are designed to be used with third-party AI platforms including but not limited to ChatGPT (OpenAI), Claude (Anthropic), Gemini (Google), Perplexity AI, and Meta AI. Thumbprint Curriculum is not affiliated with, endorsed by, or responsible for the outputs of these platforms. AI-generated content should always be reviewed, edited, and approved by the practitioner before publication. AI tools can produce inaccurate information and content that requires professional review. Use all AI-generated content as a starting point — not a finished product.

LEGAL & FINANCIAL INFORMATION

Nothing in this prompt book constitutes legal, financial, tax, or professional advice. Templates related to contracts, informed consent, and legal agreements are provided as starting-point frameworks only and must be reviewed by a licensed attorney in your jurisdiction before use. Financial projections and revenue estimates are illustrative only and are not guarantees of specific business outcomes. Always consult a qualified financial advisor for decisions that affect your business finances.

IWT FUNDING INFORMATION

Information about Incumbent Worker Training (IWT) funds is provided for educational purposes only. Funding availability, eligibility requirements, award amounts, and application processes vary by state, workforce board, and funding cycle. Thumbprint Curriculum makes no guarantee of funding availability, application success, or award amounts. Always verify current funding information directly with your local workforce board.

INTELLECTUAL PROPERTY

This prompt book is the intellectual property of Thumbprint Curriculum. The prompts, frameworks, and educational content herein are licensed for personal and business use by the individual or organization that received this guide. Redistribution, resale, republication, or use in derivative training materials without written permission from Thumbprint Curriculum is prohibited.

RESULTS DISCLAIMER

Business outcomes referenced in this prompt book — including revenue projections, conversion rates, time savings, and retention improvements — are based on practitioner-reported experiences and industry averages and are not guarantees of specific results. Business results depend on many factors including market conditions, practitioner effort, local competition, and implementation quality. Individual results will vary.
